Telemetry...
the technology that allows the remote measurement and reporting of information of interest to a system designer or operator. Telemetry refers to either wireless

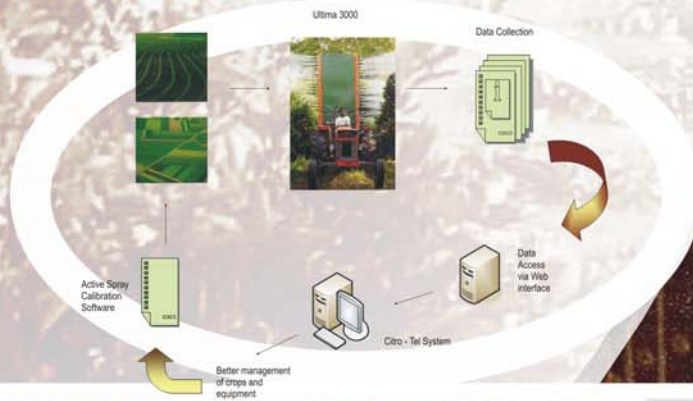

Kreon Technology's Telemetry System, allows for...

- Flexible and customizable interface for field data gathering and logging
- Using GPRS as default transfer medium over cell phone networks and the Internet
- Secure Gateway routes data from multiple sources to one or more destinations
- End-to-end data security is provided
- Persistency of data is guaranteed (where the transfer medium may be interrupted)
- Data processing and information presentation is flexible and customizable

Record the geographical position and flow
Protect the equipment by monitoring
Generation of compliance reports
